A computer peripheral is a device that is connected to a computer but is not part of the core computer architecture. The core elements of a computer are the central processing unit, power supply.

Then, a career as a computer systems support specialist would be a good choice for you! At Oklahoma City Community College, you can earn an associate degree in applied science or a certificate of mastery in computer science with a computer systems support option.

A computer locates an operating system in storage, usually loads it into memory (RAM), and hard disk. When a user issues a command to start application software such as a Web browser or a word processing program, the operating system locates the program in storage, such as on a CD, loads it on memory, DVD, and hard disk.
